

RKCSI Student Fellow: Mohammad Hossein Jarrahi

Mohammad is a PhD student at The School of Information Studies at Syracuse University. He received a BSc in Public Administration from Shahid Beheshti University, Tehran, and a Master of Science in Information Systems from the London School of Economics. His master dissertation conducted a structural analysis of how Course Management Systems are used in practice.

His research interests lie in the interplay between information and communication technology artifacts and organizational elements like structures and processes . In particular, he is interested in inter-organizational arrangements as the empirical contexts of study, since these domains demonstrate more complex interactions between contextual contingencies and ICT. He is currently working with Dr Steve Sawyer on a NSF-funded project which investigates the innovation network that has given rise to the Microsoft Surface.
